ARMY TRAINING INFORMATION SYSTEM (ATIS)

THE FUTURE OF ARMY TRAINING

A SOLDIER'S SOLUTION

- **Modern Systems Meeting User Expectations:** ATIS will deliver one modern user interface sharing common design standards across capabilities for a singular user experience.

- **Tools for Individuals at Echelon:** Role-based access controls provide users with access to the data and applications they need, from individual training to unit reports.

- **Intuitive and Efficient:** User-centered design reduces the need for users to create unofficial workarounds.

ENABLING READINESS

- **Improved Reporting and Visibility:** ATIS allows leaders and organizations to see every aspect of training information in one place with greater fidelity and accuracy than ever before.

- **More Time for Training:** Less time managing data equals more time for training. From the individual through the division, creating, managing and viewing data will be more efficient.

- **Training Management:** With all data and capabilities in one suite of applications, training management is easier than ever. ATIS provides the ability to see all aspects of training in one location, from scheduling facilities and coordinating resources to evaluating and certifying unit readiness.

MISSION

Product Manager Army Training Information System will develop, integrate, test, deliver, operate and maintain an enterprise capability for the Army training and education communities.

FAST FACTS

One system will replace more than 20 legacy training systems.

Agile software development enables the continuous delivery of new capabilities, providing users with new tools as soon as possible.

The web-based system will be the authoritative source for Army training data.
